The OCIE® Advantage for Mortgage Servicing

INFORMATION MANAGEMENT SUITE

The Mortgage Servicing industry is moving fast, dictated by changing regulations and the continual need to streamline processes. Data intensive activities increase the urgency to have immediate access to all of your critical mortgage servicing information.

OCIE's Information Management Suite centralizes and archives important mortgage servicing information into one secure location and provides robust functionality designed to increase productivity and minimize risk. Employees are empowered with the information they need, when they need it.

OCIE's Information Management Suite includes Enterprise Report Management, DataDigger® for Automated Data Extraction, DataStore, and Document Management/Workflow. When implemented, OCIE allows your organization to accelerate performance and keep pace with changing business demands.

Enterprise Report Management (ERM)

OCIE's ERM solution accepts mortgage servicing reports from any source, in any format, for long-term, secure access and archival. OCIE's proprietary report viewer gives users access to tools, such as report viewing, searching and sharing.

DataDigger

OCIE's DataDigger solution is the fastest way to automate data extraction from even the most complex mortgage servicing reports. DataDigger reduces dependency on costly database query/extraction tools and internal resources.

DataStore

OCIE's DataStore solution is ideal for servicers who need to combine data across multiple reports or over a period of time. Data extracted from mortgage servicing reports, as well as other sources of data, is stored in a hosted SQL database defined by the customer.

Document Mgt & Workflow

OCIE's Document Management & Workflow solution is designed to manage and archive electronic documents. Using meta-data, indexing and retrieval capabilities, users can access information and route documents through business processes with an air-tight audit trail.

OCIE as a Managed Application Service

OCIE is offered as a managed application service. All of the OCIE system hardware, software, 24/7 system administration, support, maintenance, and backup and disaster recovery services are included in the monthly agreement.

OCIE's subscription service makes it possible for any organization to safeguard intellectual property yet avoid unknown technology risks, large up-front capital investments and steep costs associated with internal administration, equipment and storage. OCIE as a managed service reduces resources from IT; allowing your organization to focus on revenue generating projects that save time, effort, and money.
