The information you need, the moment you need it.

OCIE is a fully managed information management platform built for regulated industries.

Most platforms hand you software and walk away. OCIE is different.

We capture the reports and records your systems already generate, and store them so your team can search, trust, and act on them. Information is stored permanently, delivered automatically, and fully managed, so you never worry about the security or infrastructure behind it.

The problems OCIE Solves:

- Reports sit buried in systems nobody wants to touch. Mainframe files come out as noise. A single audit request turns into an all-day search.
- Every workaround you've built (the homegrown script, point tool, manual export) is one more thing that can break.
- If an auditor asks and you can't produce it, you're exposed. If the one person who knows the old system leaves, you're stuck.

There's a better way to handle it.

OCIE turns the information locked in your systems into a permanent, tamper-proof record you can search and hand to an examiner.

"OCIE to us, to our business, is a necessity. It's not a want. It's a need. We need them to continue to do business the way we do"

– Amy Schumacher,
SVP & Director of Loan Servicing, First Bank of LA

- **37 years in business**
- **98%+ client retention**
- **SOC 2 certified**

Why teams choose OCIE

- DataDigger pulls any field your team needs, no query language, no click charges
- Every record locked the moment it's created. Nothing altered, deleted, or moved
- Private, controlled infrastructure, not a shared public cloud
- One contract, no recurring storage costs, no surprise increases
- Truly fully managed. We host it, run it, secure it, and support it
- Retire legacy systems without losing a thing. Produce records instantly, even years later
- 10-15 min response times, zero missed SLAs, with nearly four decades of 100% uptime

What the first 90 days look like

Most clients are fully stood up in weeks, with training built into onboarding, so your team is pulling records inside OCIE before the old system is fully retired.

Before this goes to finance, three numbers are worth having ready

1. *Staff hours to produce one audit-ready report today*
2. *Exposure if that report can't be produced on request*
3. *What the cost becomes when the one person who understands the legacy system leaves*

See it for yourself.
